US expansion update

***Maiden US Laboratory FoodPrint® installation,
Appointment of US importer for FoodPrint® and
First PO from US CLIA certified Lab heralds start of US expansion***

Omega (AIM: ODX), the specialist medical diagnostics company focused on promoting a personalised and functional approach to health and nutrition, announces that it has now received the maiden purchase order ('PO') for its FoodPrint® system from a CLIA certified ('Clinical Laboratory Improvement Amendments') laboratory in the United States, and has appointed a new US importer for FoodPrint® kits.

Using a small finger prick of blood, the FoodPrint® test can quickly identify an individual's unique food sensitivity reactions, allowing the patient to adjust and plan to a new diet and address IgG-mediated food sensitivities. FoodPrint® analyses up to 222 foods for IgG antibodies and is trusted by more than 150 laboratories worldwide, to help fast track a guided elimination diet allowing a more focused and actionable result for practitioners and their patients.

The Board expects installation at the laboratory to commence later this month and after a period of validation and gaining necessary approvals, the processing of tests to begin later this quarter. As well as being CLIA certified, the laboratory receiving the system is also College of American Pathologists accredited and specialises in providing functional tests for both consumers and healthcare practitioners.

Omega has also secured an importer for FoodPrint® kits into the USA. The importer will import kits for the CLIA laboratory as well as for Omega's own direct channels in future.

Although the value of this initial PO is circa £50,000, the US market is a key area of focus for Omega's growth strategy and this installation will be the first in the US market in over seven years, representing the beginning of Omega's planned expansion into the USA.

Jag Grewal, CEO of Omega Diagnostics, said: *"The US is the single largest market for food sensitivity testing globally, with an ever-increasing demand for personalised medicine, and is a focus area for our growth plans. This installation reflects a key milestone in our expansion plans, the receiving laboratory is ideally placed to commercialise FoodPrint® in the US market as they are already providing a range of other functional tests. The appointment of the US importer will act as a foundation for our expansion into the region."*

"Once the system has been commissioned, we plan to collaborate closely with our laboratory partner to ensure FoodPrint® is promoted effectively through their existing healthcare practitioner and direct to consumer channels."
